Mark Maglana

mark.maglana@linux.com
https://relaxdiego.com
https://github.com/relaxdiego

I enjoy building software systems and I've spent my career learning as much about the art's numeours aspects by taking on assignments and gaining experience in:

- Design and Development

- DevOps

- Product Management

- Field Delivery

- Community Management

- Entrepreneurship

Certifications

CNCF Certified Kubernetes Administrator
Certificate ID: LF-a5uqzdwppm
(First awarded 2017; Renewed 2021)

AWS Certified DevOps Engineer - Professional
Certificate ID: T1M94XR2HNE4Q9G8

Highlights

- **Designed and implemented the CI/CD platform for Tesla** - I was hired by Tesla to build their CI/CD platform. I named the project ATM (pronounced 'Adam'), conceptualized it with inputs from targetted stakeholders, and implemented it using a combination of open-source and built-from-scratch code. It continues to onboard in-house software to this day and has become the de-facto CI/CD standard inside the company.

- **Produced a Kubernetes toolkit for Teradata** - Teradata needed a toolkit for configuring Kubernetes that catered to the company's very specific needs. I mentored a team of DevOps engineers to produce this toolkit called KubeKit. I focused on equipping the team with Scrum/Agile practices as well as a CI/CD platform allowing them to iterate quickly and deliver a 1.0 release within 5 months.

- **Increased billing module accuracy and speed** - When a former employer's billing module was producing inaccurate results, I took on the task of debugging the problem. After finding the cause, I introduced a number of fixes that improved the speed and accuracy of the reports.

- **Contributed to the fast delivery of the Cisco 9K OVSDB plugin** - Dimension Data needed to deliver an agent that allowed Cisco 9K switches to work with VMware NSX. I volunteered to study the associated open standards as well as the proprietary protocols for which we didn't

have any documentation at the time. I codified everything that I learned into a fully automated test harness that became part of the team's CI/CD pipeline.

- **Talked at various meetups and conferences** - I've presented on various topics such as HA Kubernetes Outside the Cloud (SF k8s Meetup 2017), How to Write Fully-Tested Ansible Modules (AnsibleFest NY 2016), Deploying OpenShift with Ansible (Internal talk 2016), Baking and Frying Machine Images (jFrog SwampUP Napa Valley 2017), Multi-node DevStack with Puppet (OpenStack Summit Atlanta 2014), How I Built My Own BDD Framework (Ruby on Rails Meetup, Los Angeles 2013), and Introducing Scratch Programming (2nd-grade Classroom 2017).

- **Reduced a 2-day manual process to 5 seconds** - While building the MIS for a metal fabrication shop, I learned about a manual process that took shop floor engineers 2 days to complete. After some research, I was able to build a desktop app that reduced the computation time to 5 seconds.

- **Recipient of academic excellence award for best strategic plan** - I wanted to understand the business of software and decided that focusing on the basics of business management was key. I then applied for our state university's graduate program for management where I was accepted. During the program, I was top of class for Operations Management, Financial Management, and Business Strategy. I then used everything that I learned to create a strategic plan for our family business which resulted in me getting the academic excellence award for best strategic plan.

Experience

Senior DevOps Engineer (Aug 2021 - present)
The Linux Foundation

The Linux Foundation's mission is to accelerate open technology development and commercial adoption.

Field Software Engineer (APAC Enterprise) (May 2019 - Jul 2021)
Canonical Services Ltd.

Canonical produces Ubuntu, provides commercial services for Ubuntu's users, and works with hardware manufacturers, software vendors and cloud partners to certify Ubuntu. My responsibilities range from developing software for automated configuration management to on-site deployment of our products according to customer requirements.

Achievements
- Produced Kubernetes Operators for Grafana, Prometheus, and AlertManager using Juju, a Canonical product for automating the provisioning and configuration of servers and containers. The three operators are able to automatically connect to each other via Juju's relations functionality. Demo Video

- Delivered MAAS, OpenStack, and Charmed Kubernetes in various customer sites.

- Produced an internal guide for validating a customer's existing Kubernetes Cluster that was installed using Kubespray/Kubeadm.

- Produced a beginner's guide for developing a Python-based Kubernetes Operator for those just

getting started with Kubernetes Operators. Video

- Produced demo videos for pre-sales purposes that highlights the features of Kubernetes. Video.

- Produced a guide for colleagues about proper Python dependency management. Video.

- Produced a video for the benefit of those who are just starting with Juju Charms development. Video

- Produced a tool that allows DevOps Engineers to work together on the same remote terminal. Especially useful for situations where a team needs to debug a server collectively. Github Repo

President, Co-founder (Nov 2018 - Dec 2020)
Amplify Inc., Philippines

Amplify Inc (amplifyinc.ph) was an SEC-registered corporation that aimed to accelerate the Philippines' digital transformation. It specialized in the design and delivery of building auxiliary systems such as Fire Detection and Alarm Systems; Local Area Networking; Wireless Design and implemention; as well as Building Management Systems.

Achievments

- Assembled a board of directors to oversee the direction of the company. The board was composed of a former IT manager, an electronics and communications engineer, and a certified public accountant.

- Built the company from the ground up with proper support for sales and engineering. Both departments synced up twice weekly via stand ups and a shared task board. All communications were logged in a sales database that allowed sales and engineering to stay synchronized.

- Achieved a decent rise in revenue in its first year to be nearly self sustaining within a year but was hit hard by the pandemic and lock downs just when it was about to break even.

Senior Staff DevOps Engineer (Dec 2017 - Oct 2018)
Tesla, Fremont, CA

Tesla's mission is to accelerate the world's transition to sustainable energy.

Achievements

- Designed and implemented a CI/CD platform that software engineers used for their applications. They onboarded their projects via a declarative YAML file that they commit with their code. The platform provided services such as (1) container image build and publish, (2) Unit, integration, and black box testing, (3) static code analysis, (4) chat notifications, (5) build health dashboards, (6) auto-DB migration, and (7) blue-green deployments to Kubernetes. The project has since matured to have a internal community of contributors as well as a collection of over 600 services being managed.

DevOps Engineer (Nov 2016 - Dec 2017)
Teradata, Santa Clara, CA

Teradata Corporation is a Fortune 1000 provider of data warehouse platforms, software and services. Our team is at the center of the company's thrust to build modern data analytics products around Teradata's traditional offerings.

Achievements

- Team Lead for the internal Kubernetes distribution project called KubeKit. This project is a core critical component of all the microservices-based products that Teradata is building. I led the team, provided product requirements guidance, wrote code, as well as oversaw the internal community management aspects that were necessary to onboard the various products and programs on top of the project. I also worked on growing the team such that it can support all the Kubernetes requirements of the aforementioned Teradata products.

- I functioned as the DevOps Engineer for the AppCenter project where I was responsible for guiding the architecture of the team's software manufacturing pipeline. I designed the pipeline and also did the initial implementation. I later served as an adviser/mentor to the team members that were implementing the rest of the design. This software manufacturing pipeline is critical in ensuring the timely delivery and quality of AppCenter which is a central component of Teradata's UDA program.

- I was a member of Teradata's internal DevOps Technology Council. This council is tasked to collate, curate, and evangelize the DevOps best practices across Teradata to improve its Engineering operational efficiency and effectiveness. I was assigned to the "standardized processes" component of the framework that the council is building.

QA/Release Engineer (Jan 2014 - Sep 2016)
Dimension Data, Pleasanton, CA

Dimension Data is a leading provider of professional, cloud, consulting and managed services for advanced IT solutions. Our team actively contributed to Ansible, OpenStack, Open vSwitch, and Open DayLight. My official title was QA/Release Engineer but my responsibilities spanned those of a software engineer/architect.

Achievements

- Designed and implemented a non-interactive agent that automatically launched time-bound AWS spot instances as needed for use as auxiliary Jenkins workers that handled non-time-critical builds.

- Wrote Ansible modules to be used for provisioning resources on Dimension Data's cloud service.

- Developed an Ansible-based project that deployed an HA OpenShift PoC for our CI/CD pipeline.

- Designed and implemented the full stack of a web application that was designed to transform data from one format to another. The system used Rails, Postgres, Redis (for job queueing), Resque, and Ceph both for persistent block and object storage.

- Designed and implemented the automated test harness for the N9K OVSDB plugin for NSX.

- Designed and implemented the Cisco N9K OVSDB plugin CLI utility.

- Mentored development teams in new technologies, standards, and even 3rd-party protocols that they needed to incorporate or interface to. This allowed them to hit the ground running and deliver within budget.

Senior Director Of Engineering (Jul 2012 - Jan 2014)
Morph, Manhattan Beach, CA

Morph (a sister company of Exist Global) was the first PaaS built on top of AWS and later on pivoted to providing IaaS appliances that its customers can install inside of their data center to use as a springboard for quickly building their own cloud computing environment. My official title was Senior Director of Engineering but my actual roles spanned that of a software engineer/architect.

Achievements

- Designed and developed a billing module for the product.

- Wrote a Ruby client library for the OpenStack API.

- Wrote a Cucumber-based integration test for the QA team.

- Mentored developers on proper software development practices.

- Helped set up the CI tools and process to ensure the main branch always has deployable, stable code.

Senior Director for Product Development (Jan 2008 - Jul 2012)
Exist Global, Manila, Philippines

Exist provides tailored solutions, consulting and full cycle IT services to customers around the globe. At the time, I was assigned to Morph to help produce its cloud computing product.

Responsibilities

- Oversaw the design and implementation of Morph AppSpace, one of the earliest Platform-as-a-Service providers built on top of AWS in the market.

- Managed the product roadmap to ensure that requirements are prioritized properly and that they contain the right information.

- I helped Marketing Communications in their effort to generate product information for various marketing collateral.

- Implemented agile practices in Engineering to ensure timely delivery of stories and an overall coordinated effort of releases.

Systems Analyst/Programmer (Mar 2003 - Dec 2006)
Deco Machine Shop, Davao City, Philippines

Deco Machine Shop, Inc. provides industrial machine fabrication services nationwide. Its major clients include Dole Philippines and San Miguel Corporation. As a systems analyst, my job was to understand the processes of the company and build software tools to automate parts of it. Software tools developed include a gear combination application which reduced a machinist's work from one day to just under 5 seconds while increasing work precision.

In 2007, I took a year off to obtain my second Master's degree.

Systems Analyst/Programmer (Jan 2002 - Jan 2003)
iThink Technologies, Davao City, Philippines

iThink provides business software and training solutions for major companies nationwide. Major clients include the Bangko Sentral ng Pilipinas, Meralco, and Davao Light and Power Company. I was involved as a systems analyst/programmer for the development of purchasing systems, HR systems, and other enterprise applications for iThink's major customers. I also spearheaded the use

of the Unified Modeling Language within the company and also provided some in-house training for a number of then upcoming technologies and development platforms.

Web Developer (Jan 2001 - Jan 2002)
Smartweb Philippines, Cebu City, Philippines

Smartweb was a US-based company with its production facility based in Cebu. It was involved in developing websites for small to medium sized businesses in the USA. I was a team leader in this organization. Apart from this, I also developed Smartweb's employee time tracking and billing system, which later helped speed up the invoicing and employee time tracking for the company.

Student Volunteer - Web Developer (Jun 1997 - Oct 2000)
University of San Carlos, Cebu City, Philippines

While attending college I was also a volunteer of the University of San Carlos Web Development Team which was tasked to build and maintain the university's website. I was involved in the implementation in both the client side and the server side of the website and was later promoted to team leader. The team was, by then, composed of 10 student volunteers.

Education

Master of Management, Technology, Innovation, and Commercialization
Jan 2007 - Dec 2007
The Australian National University
Acton, Canberra ACT 2601, Australia

Master of Management
May 2004 - Apr 2006
University of the Philippines - School of Management
Mintal, Davao City 8022, Philippines

BS Computer Engineering Jun 1995 - Oct 2000
University of San Carlos
P. del Rosario Street, Cebu City 6000, Philippines

A Few LinkedIn Recommendations

> When I joined Tesla and understood the problems we needed to solve around CI/CD I immediately thought of Mark and the work we did together at Dimension Data. Mark did amazing work for us at Tesla building an entirely new pipeline in just a few months. He worked with Developers, QA and IT OPS to ensure what he was building could be supported and useful. It is always a pleasure working with Mark. The team here still misses him!
>
> — Mike Outland, Sr. DevOps Manager at Tesla

Mark is a world class software professional and DevOps craftsman. He is a rare combination of somebody who can elegantly operate across the spectrum ranging from the toughest implementation detail all the way to thought-leadership and evangelism. Mark is the kind of professional you can entrust with a problem statement in its most abstract form and step back, assured that the solution will be built with cutting-edge technology choices and delivered on time. It's always a pleasure to work with Mark knowing he can be your go-to-person, an advisor and leader in his field, and an evangelist aware of where the industry is going.

— Chai Atreya, Head of Engineering at Teradata

Mark is an exceptionally capable software architect and developer. When a new technology or language needed to be implemented, Mark was able to obtain a deep level of understanding in a very short amount of time. I have seen him architect and implement everything from full APIs to cloud middleware to full front-ends. Over the years he has gained a wide breadth of knowledge in everything cloud & container. Working with him has been regularly humbling and wonderfully educational. Beyond his technical prowess, Mark is also very fun to work with and mentors people exceptionally well. He uses his great sense of humor to take the stress out of tough challenges and motivate teams to push on. I give Mark my highest recommendation to anything he wants to take on. He will be a rare gift to the next company he works with.

— Aimon Bustardo, Lead DevOps Engineer, SalesForce.com

Mark was one of my favorite people to work with at Teradata — the energy he brings to the projects and teams he works with is infectious. Mark's leadership style stems not only from his energy, but his expertise as a DevOps Engineer. He is respected by colleagues at all levels and is a huge asset for any modern engineering organization.

— Tim McIntire, VP Shared Services, Teradata

Mark is one of the few people I know who can truly perform well in a player/coach role. While his technical chops may be second to none, he combines those chops with a natural ability to lead from the front. He would most certainly be a valuable asset to any team lucky enough to have him.

— Jason Reslock, Senior DevOps Manager, SalesForce.com

Possibly the best reason I looked forward to going to work everyday is because of the opportunity to work closely and be mentored by Mark. I see him as a true software craftsman who is passionate about code and cares a lot about code quality, readability and testability. He can lead teams, mentor teammates, commit production code within time and budget while giving a helping hand with whatever is the issue of the day.

— Bert Diwa, Software Engineer in Test, CrowdStrike

[Mark] produced solid designs. He was an expert at Python (and apparently Ruby too). He seemed to know about every Open Source project out there. His mastery of all things Git and GitHub were critical support to several of us who had never used Git before. All in all, Mark was an invaluable resource to the project and to the team. He seemed to get his dozen projects done in time while simultaneously providing whatever technical support was being asked of him by the team.

— Jay Riddell, Sr. Web Designer, Davis Instruments

Mark was a particularly able and focused student, capable of working independently and evaluating ideas and approaches critically. His particular interest at the time [while studying at the Australian National University] was the role, design and development of business incubators as a tool for regional development.

— Don Scott-Kemmis, Innovation Policy Consultant
